                                                                                                                                                        bacterial infection; antibacterial; bacterial meningitis; antibacterial; neuroprotective; otitis media; auditory; transferrin binding protein B.
                                                                                                                                                                                                                                                                                                                                                                           The invention comprises a molecule (e.g. peptide) which is capable of: binding to a region of a transferrin protein that is recognized by a bacterial transferrin binding protein, and eliciting an antibody to the bacterial transferrin binding protein. The transferrin binding molecule of the invention is useful for preventing and treating bacterial infections (e.g. bacterial meningitis and otitis media). The present amaino acid sequence represents a region of the Moraxella catarrhalis
                                                                                                                                        Moraxella catarrhalis transferrin binding protein B region - SEQ ID 17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Moraxella catarrhalis transferrin binding protein B region - SEQ ID 15.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises a molecule (e.g. peptide) which is capable of: binding to a region of a transferrin protein that is recognized by a bacterial transferrin binding protein; and eliciting an antibody to the bacterial transferrin binding protein. The transferrin binding protein of the invention is useful for preventing and treating bacterial infections (e.g. bacterial meningitis and otitis media). The present amaino acid sequence represents a region of the Moraxella catarrhalis transferrin binding protein B.

It can also be used as a carrier for other antigenic determinants, e.g. of bacteria tumour centain polyasccharide antigens or abnormal polyasccharides present on tumour cells, particularly to make conjugate vaccines. The tbpB DNA can be used to detect nucleic acid encoding transferrin receptor protein,
                    Transferrin-binding molecules useful for eliciting antibodies to
bacterial transferrin binding proteins, which block bacterial transferrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    encoding transferrin receptor of a Moraxella strain - also proteins, ful in vaccines, as diagnostic agents and in the production of
                                                                                                                                                                                                             The invention comprises a molecule (e.g. peptide) which is capable of: binding to a region of a transferrin protein that is recognized by a bacterial transferrin binding protein; and eliciting an antibody to the bacterial transferrin binding protein. The transferrin binding molecule of the invention is useful for preventing and treating bacterial infections (e.g. bacterial meningitis and otitis media). The present amino acid sequence represents a region of the Moraxella catarrhalis transferrin binding protein B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The DNA sequence is also referred to as the TbpB gene. The TbpB gene is used to produce combinant Tbp2; for identification or diagnosis of Moraxella, or for cloning related species, using hybridisation assays; and for genetic immunisation against Moraxella infections, e.g. oftits media. The Tbp2 proteins are useful as antigens, either in vaccines (including components of conjugate vaccines that contain antigens from other bacteria or from tumours, in which case they elicit production of antitumour antibodies that may be coupled to chemotherapeutic agents or biologically active agents) or to raise antibodies (for use as diagnostic reagents and for treating Moraxella infections), also for detecting Moraxella antibodies
                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid encoding transferrin binding protein 2 of Moraxella catarrhalis, useful for diagnostics, immunization and recombinant protein
                                                                                                                                                                                                                                                                                                                                                       TbpB gene; Tbp2; transferrin binding protein; diagnosis; otitis media; genetic immunisation; Moraxella infection; antigen; vaccine; detection; antitumour antibody production; therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence is the Moraxella catarrhalis strain M35 transferrin binding protein (TDp2) of the invention. The DNA sequence is also referred to as the TDpB gene. The TDpB sequence is also referred to as identification or diagnosis of Moraxella, or for cloning related species, using Mybridiation asaays; and for genefit immunisation against Moraxella infections, e.g. ottis media. The TDp2 proteins are useful as antigens, either in vaccines (including components of conjugate vaccines that contain antigens from other bacteria or from tumours, in which case they elicit production of antitumour antibodies that may be coupled to chemotherapeutic agents or biologically active agents) or to raise antibodies (for use as diagnostic reagents and for treating Moraxella infections), also for detecting Moraxella antibodies
                                                                                                                                                                                                                                                                                                                                                         Nucleic acid encoding transferrin binding protein 2 of Moraxella catarrhalis, useful for diagnostics, immunization and recombinant protein production.

```
The present sequence is the Moraxella catarrhalis R1 transferrin binding protein tbpB, which can be used as an immunogen, e.g. in vaccines to protect against diseases caused by M. catarrhalis (specifically otitis media), or to raise antibodies for diagnosis and therapy. It can also be used as a carrite for other antigens determinants, e.g. of bacteria containing polysaccharide antigens or abnormal polysaccharides present tumour cells, particularly to make conjugate vaccines. The tbpB DNA can be used to detect mucleic acid encoding transferrin receptor protein, e.g. for diagnosis or gene isolation, by usual hybridisation assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding transferrin receptor of a Moraxella strain - also proteins, useful in vaccines, as diagnostic agents and in the production of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                        The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. Luminescens and related species, to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polymorptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter
                                                                                                                                                                                                                                                                                                                                                                                                        response or sensitivity to troins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, particularly toxins and entibacterials useful as insecticides, particularly toxins and genes, proteins, vectors containing the genes and Ab are also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            neural development disorder; apoptosis disorder; immune response disorder; dementia; anxiety; headache; migraine; delirium; schizophrenia; manic depression; mental retardation; dyskinesia; neural degenerative disorder; Alzheimers's disease; Parkinson's disease; depression; fear; learning disorder; brain cancer; gene therapy; human; nootropic; tranquilizer; neuroleptic; neuroleptic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins
                                                                                                                                                               Genomic sequence of Photorhabdus luminescens and encoded polypeptides, useful e.g. as therapeutic antimicrobials and agricultural pesticides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

New isolated human leucine rich repeat containing polypeptides, HLRRNS-2 and HLRRNS-3, useful for treating, preventing disorders e.g., anxiety, headache, migraine, schizophrenia, manic depression, or delirium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alzheimers's disease, Parkinson's disease affective disorders, depression, schizophrenia, anxiety, fear, learning disorders and brain cancer. The invention is also used in gene therapy. The present sequence is human LRR protein. The protein is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; secreted protein; immunestimulant; immunesuppressant; virucide;

AAA16618 to AAA16697 encode the human secreted proteins given in AAY94898 to AAA994980, isolated from human adult brain, adult thyroid, adult thyroid, adult cretina, foetal carcinoma, adult budd, adult thyroid, adult cattilage, kidney, foetal carcinoma, adult uterus, foetal tidney, does a dult cattilage, kidney, foetal bracenta, adult uterus, adult tumour, and brain, adult thyrois, foetal bracenta, adult uterus, adult tumour, and cadult bladder, cDNA libraries. The polymuclectides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. The polymuclectides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight markers on southern gals, and so thromosome markers or tags to identify chromosomes or to map gene positions. The proteins can be used in the treatment of immune deficiencies and disorders, such as severe combined infections include human immunodeficiency virus (HIV), hepstitis, hepsesviruses, wycobacterial, bacterial, fungal and other candidiasis. The proteins and clicude used to treat autoimmune disorders such as connective tissue disease, multiple sclerosis, systemic lupus crythematosis, rheumatoid arthritis, autoimmune disorders and attritis, autoimmune disorders and altergic conditions, such asthma. AAA16598 to AAA16774 represent creat allergic conditions, such asthma. AAA16598 to AAA16774 represent creat allergic conditions, such asthma. Expectine sent invention

This invention describes a novel composition containing (apart from a carrier or excipient), a novel PRO245 polypeptide (I), its agoniat or antagonist, or their fragments, for modulating: (i) infiltration of inflammatory cells into tissue; (ii) an immune response; or (iii) T cell factories of the invention have anti-inflammatory, anti-utoimmune and anti-diabetic activity. (I), and its (ant)agonists and their fragments, are used to treat immune-related diseases, particularly (i)-(iii). The products of the invention have anti-inflammatory, anti-autoimmune and anti-diabetic activity. (I), and its (ant)agonists and their fragments, are used to treat immune-related diseases, particularly call-mediated diseases. The diseases treated include systemic lupus systemic sclerois (scleroderma), idopathic spondyloarthropathies, systemic sclerois, scleroderma), idopathic inflammatory myopathies (dermatomyositis, polymyositis), signament of inflammatory systemic vasculitis, sarcoidosis, autoimmune hemolytic anemia chrombocytopenia, paroxysmal nocturnal hemoglobinuria), autoimmune thrombocytopenia, thyroiditis (draws's disease, Hashimoto's thyroiditis, invenile lymphocytic thyroiditis (draws's disease, labahimoto's thyroiditis, mellitus, immune-mediated renal disease (glomerulonephritis).
                                                                                                                                                                                                                                                                                                 Inflammatory cell infiltration; immune response; T cell proliferation; anti-inflammatory; anti-autoimmune; anti-diabetic; spondyloarthropathy; T cell-mediated disease; spondyloarthropathy; sclerosis; renal disease; inflammatory myopathy; hemolytic anemia; thyombocyclopenia; thyotoditis; diabetes mellitus; demyelinating polymeuropathy; cirrhosis; enteropathy; multiple sclerosis; polymeuropathy; polymeuropathy; cirrhosis; enteropathy; sclerosing cholangitis; inflammatory bowel disease; whipple, s disease; skin disease; dermatitis; psoriaais; asthma; allergic rhinitis; tumor; food hypersensitivity; urticaria; eosinophilic pneumonia; transplant; idiopathic pulmonary fibrosis; graft rejection; PRO245; human; PRO266;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Composition containing novel polypeptide PRO245, its agonist or

AXY13344-403 represent secreted and transmembrane human proteins. The CDNA sequences are obtained from CDNA libraries, prepared from fetal cDNA sequences are obtained from CDNA libraries, prepared from fetal lung, fetal krain, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known copypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the crepair of acute and chronic mucosal lesions (e.g. enterocolitis, copinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and edevelopment, diseases related to growth or survival of nerve cells including Parkinson's disease, Alzheimer's disease, ALS, neuropathies or cancer. PRO265 can be used as a target for anti-tumor drugs. PRO533 may compered as an anti-thrombotic agent; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, con be used to treated tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated human genes and polypeptides used in, e.g. treatment of gastrointestinal ulceration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score 42; DB 2; Length 696;

The present sequence is the human protein PRO266, encoded by UNQ233 cDNA, designated as clone DNA37180. It is isolated from human foetal brain tissue. PRO266 has significant homology to a SLIT protein, indicating trissue. PRO266 has significant homology to a SLIT protein, indicating that it could be a leuchine rich repeat protein. It enhances or suppresses the infiltration of inflammatory cells into tissues, proliferation of T-I ymphocytes and modulates the immune response. This sequence is useful for treatment of immune related disorders, like SLB, rheumatoid/juvenile or treatment of immune related disorders, like SLB, rheumatoid/juvenile arthritis, spondyloarthropathy, systemic solerois (soleroderma), arthritis, arthrombocytropenia, thyroiditis e.g. Grave's disease, diabetes canaemia, thrombocytropenia, thyroiditis e.g. Grave's disease, diabetes mellitus, immune-mediated renal disease e.g. glomerulonephritis, demyelinating diseases such as multiple sclerosis and Guillain-Barre syndrome, hepatoblilary disease like hepatitis and primary biliary syndrome, hepatoblilary diseases like hepatitis and primary biliary cirrhosis, inflammatory and fibrotic lung diseases such as inflammatory bowel disease (e.g. Crohn's disease), autoimmune or immune-mediated skin diseases such as sociated diseases such as safat. Persons and munological diseases con the lungs such as eosinophilic pheumonia and transplantation associated diseases such as graft-versus-host-disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Composition for treatment and diagnosis of immune related diseases e.g. Grave's disease comprises a PRO245, PRO217, PRO301, PRO355, PRO331 or PRO326 polypeptide or its agonists or antagonists (preferably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                             18-JAN-2001
                                                                                                                                                                                                                                                                                                                                                     15-SEP-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-DEC-1999
 AAB80227;
The invention relates to a novel nucleic acid encoding a PRO polypeptide. The polypeptides and polynuclectides of the invention may be useful as research tools and as therapeutics for treating enterocolitis, Zollinger-Bilison syndrome, gastrointestinal ulceration, psoriasis, cancer, Parkinson's disease, Alzheimer's disease, ALS, neuropathies, derma carring and wound healing, nerve repair, thrombosis, bone and/or cartilage formation, anglogenesis, asthma, rheumatoid arthritis, multiple sclerosis, inflammatory disorders, atterosclerosis, cardiac injury, infertility, premature aging, AlDS, diabetes complications and stroke. The molecules may also be utilised during gene therapy procedures and transagenic animal production. The current sequence is that of the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel nucleic acids encoding secreted and transmembrane polypeptides with homology, e.g. to growth and cancer-associated antigens.

The present sequence is one of sixty one novel secreted and transmembrane PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosoclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), infertility, AIDS and diabbetes and retinal disorders such as retinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and

The sequence represents Human PRO266 (UNQ233), a protein involved in the immune response. PRO polypeptides, and (ant)agonists to them, are used in compositions for modulating infiltration of inflammatory cells into a cissue, modulating an immune response and modulating proliferation of tissue, modulating an immune response and modulating proliferation of T. Insue, modulating an immune response and modulating proliferation of T. Insue, modulating an immune related diseases can be treated with the compositions, such as, systemic lupus erythematosus, compositions, such as, systemic slopathic inflammatory composities, systemic sclerosis, idopathic inflammatory autoimmune haemolytic anaemia (e.g. immune pancytopaenia).

CC myopathies (e.g. Grave's disease, Hashimoto's thyroiditis), diabetes molitus, immune-mediated renal disease (e.g. immune pancytopaenia).

CC myopathies (e.g. Grave's disease, Hashimoto's thyroiditis), diabetes melitus, immune-mediated renal disease (e.g. immune pancytopaenia).

CC myopathiating polymoropathy, hepatobilary diseases such as infectious demyelinating polymeuropathy, hepatobilary diseases such as infectious demyelinating polymeuropathy, hepatobilary diseases such as infectious demyelinating polymeuropathy, hepatobilary diseases such as infectious diseases (ulcerative colitis, Crohn's disease (e.g. erythemenia multiforme and psoriasis), asthma allergic rhinitis, urticaria, food hypersensitivity, immune-mediated skin diseases (e.g. erythemenia multiforme confinence of immune-mediated skin diseases (e.g. erythemenia multiforme proteomenials), asthma allergic rhinitis, urticaria, food hypersensitivity, immunologic disease and whipple's diseases, of the lumg such as eosinophilic promeomias, idiopathic pulmonary fibrosis, transplantation associated configures and to stimulate the proliferation of T lymphocytes. Anti-PRO inhibitors, and to estimulate the proliferation of T lymphocytes, and to estimulate the proliferation of T lymphocytes antibodies can be used to detect PRO and in diagnosis p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Composition for diagnosing and treating immune related diseases, e.g. rheumatoid arthritis and diabetes mellitus, comprises a PRO polypeptide, agonist, antagonist or fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

AMU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to and to detect the presence of mammalian lung, colon, polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO colypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour of the 275 sequences are also useful to stimulate the proliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or of reprinted to finner ear utricular supporting cells or of repression, or the proliferation of endothelial cells. Some of the PRO (PBMCS), or the proliferation of endothelial cells. Some of the PRO colypeptides may modulate glucose or free faity acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor involved in binding interactions. The prolifers encoding PRO colypeptides can be used in assays to identify molecules involved in binding interactions. The prolymoclecides encoding PRO colypeptides can be used to generate probes, antisense RNA/DNA,
    Isolated , secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumors e.g. lung, breast, prostate, cervical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, PRO, antiinflammatory; dermatological; antiarthritic; antirheumatic; cardiant; antianaemic; immunosuppressive; antithyroid; antidiabetic; noctropic; neuroprotective; hepatotropic; virucide; antiallergic; antiasthmatic; immune related disorder; hepatobiliary disease; autoimmune disease; allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human PRO polypeptides (secreted or transmembrane polypeptides) and the polynuclectides encoding them. The PRO polypeptides and polynuclectides can be used in treating pathological disorders and tumnours, in therapeutic treatment of cardiac insufficiency disorders and in therapeutic treatment of disorders insufficiency disorders and in therapeutic treatment of disorders involving protein reaction by the panorceas, including disorders can also be used in treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, and skin diseases associated with abnormal keratinoscyce differentiation (e.g., psoriases, epithelial cancers such as lung squamous call carcinoma, epidermoid carcinoma of the vulva and gliomas). The sequences can be used as molecular markers for protein pinding assays, blochemical screening assays, immunoassays and cell-based assays. This sequence represents a human PRO polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid useful for e.g., treating pathological disorders encodes a secreted or transmembrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ferrara N;

New secreted and transmembrane PRO nucleic acids, for treating inframmation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, axquired immunodeficiency syndrome (ALDS), or cancer.

```
The invention describes an isolated nucleic acid (I) comprising, or which has 80 % sequence identity to, or the full-length coding sequence of, one of 275 nucleotide sequences, and which encodes a corresponding collaboration in the specification. The polypeptide encoded by (I) is used to are given in the specification. The polypeptide encoded by (I) is used to detect PRO polypeptides, link a biological activity of a cell, stimulate the release of twoour necrosis factor (TMP) alpha from human blood, modulate the proliferation or differentiation of cells or gene expressing to the uptake of glucose or free fatty acid by cells, stimulate or inhibit the proliferation or differentiation of cells or gene expression, stimulate the release of proteoglycans, stimulate the release of cytokine from peripheral blood mononuclear cells, inhibit the binding of A-peptide companies of tumour in a mammal. The nucleic acid and polypeptide encoded by it, are useful for treating inframmatory diseases, organ failure, archivosclerosis, cardiac injury, infertility, diseases, organ failure, and acquired immunodeficiency syndrome (ADS), cancer, or diabetic complications. The nucleic acid is useful as the nucleic acid is useful as the amino acid sequence of a novel human secreted and treasure typing. This is the amino acid sequence of a novel human secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; secreted and transmembrane protein; PRO polypeptide; cancer; Alzheimer's disease; ischaemia; cytostatic; nootropic; vasotropic; neuroprotective.

                                                                                                                                     The present invention relates to the isolation of novel human secreted and transmembrane proteins (PRO polypeptides), and the polynucleotide sequences are useful in molecular biology, as hybridisation probes, in chromosome and gene mapping, in generating antisanse RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides polynucleotide sequences may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals oknock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or their antibodies are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer, Alzheimer's disease or ischaemia, and in various diagnostic assays. ABU71445-ABU71505 represent human PRO polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; PRO polypeptide; secreted and transmembrane protein; anti-PRO antibody; diagnostic assay; gene expression; diabetes; bone disorder; cartilage disorder; rheumatoid arthritis; obesity; sports injury, osteoarthritis; hyper-insulinaemia; hypo-insulinaemia; hearing loss; coagulation disorder; stroke; heart attack; cardiant; antidiabetic; anorectic; vulnerary; antiarthritic; osteopathic; antirheumatic; auditory; cerebroprotective; angiogenic.
                                           New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The present invention relates to the isolation of novel human PRO polypoptides, and the polynuclectide sequences encoding them. The PRO polypoptides are secreted and transmembrane proteins. The PRO polypoptides and polynuclectides are useful for preparing a medicament useful in the treatment of diabetes, bone and/or cartilage disorders (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obesity, hyper- or hypo-insulinamenia, hearing loss, and cosquiation disorders (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or or netwal sources. Asugos7-Abusil44 represent the human PRO or netwal sources. Asugos7-Abusil44 represent the human PRO set the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequence at a supposition at the patent of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or

```
The invention relates to an isolated nucleic acid with at least 80% concleic acid sequence identity to a nucleotide sequence encoding one of concleic acid sequence identity to a nucleotide sequence encoding one of a secreted/transmembrane polypeptides, or RPO polypeptides or encoding a CC the PRO nucleic acid, a host cell for the expression of the RPO collypeptide (by culturing the host cell for the expression of the RPO polypeptide (paving at least 80% sequence identity to: (c) an isolated PRO polypeptide (having at least 80% sequence identity to: (c) an isolated PRO polypeptide (having at least 80% sequence identity to: (d) an amino acid sequence selected from the ofly propertied (b) an amino acid sequence selected from the objection); or (c) an extracellular domain of acid sequence encoded by a nucleic acid molecule deposited with an ATCC number (detailed in the specification); or (c) an extracellular domain of acid sequence amino acid sequence, an anti-PRO antibody, detecting a peptide), a chimaeric molecule comprising a PRO polypeptide of to a cheerologous amino acid sequence, an anti-PRO antibody, detecting a percent and sample suspected of containing the polypeptide, or Indianal acidity of a cell expressing a PRO245 or PRO1868 and containing the polypeptide and acids which encode PRO can be used to generate either transgent annians or knock-out animals which may be used in the conformation and screening of therapeutically useful reagents. The nucleic acids may also be used in the proposent adants and the isolated cuseful as molecular markers for protein electrophoresis, and the isolated cuseful as molecular markers for protein electrophoresis, and the isolated cuseful as molecular markers for protein electrophoresis, and the isolated cuseful as molecular markers for protein electrophoresis, and the isolated cuseful as molecular markers for protein electrophoresis, and the isolated sources. The proposite representes a PRO polypeptide are useful in diagnostic assays for PRO polypeptide and and acide may al
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, as chromosome markers, in generating probes and in tissue typing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Ashkenazi A, Botstein D, Desnoyers L, Eaton DL, Ferrara N; Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME, Goddard A; Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ, Kljavin IJ; Mather JP, Paoni NF, Roy MA, Stewart TA, Tumas D; Williams PM, Wood WI;

WPI; 2003-370793/35. N-PSDB; ACD07474.

New genes and secreted and transmembrane polypeptides (e.g. PRO245 or PRO315), useful for treating or diagnosing e.g. Alzheimer's disease, cancers, hemorrhage, rheumatoid arthritis, diabetes, cirrhosis, ischemia or strokes.

Claim 12; Fig 34; 482pp; English.

The invention describes a new isolated nucleic acid molecule comprising the full length coding sequence of the DNA deposited with the American Type Culture Collection (e.g. ATCC Deposit No. 209258), or a sequence with at least 80% identity to a DNA encoding a PRO polypeptide comprising any of 61 sequences having 164-1119 amino acids fully defined in the specification. The PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are particularly useful for detecting or treating e.g. Parkinson's disease, particularly useful for detecting or treating e.g. Parkinson's disease, c.g. Alzheimer's disease, inflammations, nephritis, wound healing, nerve capair, collateral blood vessel formation, cancers (e.g. colorectal cancer) the memorinage (or reduce risk for haemorinage), rheumatoid canceri, haemorinage (or reduce risk for haemorinage), in the colorectal conditions (e.g. keloids or scarring), restenosis, dermal fibrotic conditions (e.g. keloids or scarring), or infertility in mammals (e.g. humans, dogs, cats, cattle, horses, sheep, pigs, goats or the presence of these diseases, and diagnostic determination of the presence of these diseases, and diagnostic determination of the presence of these diseases, and diagnostic determination of the presence of the mannal stables are useful as hybridisation probes, or for screening libraries of human cDNA, genomic DNA or mRNA. The PRO polypeptides are useful as the amino content of a novel human secreted and transmembrane PRO polypeptide.

Sequence 696 AA;

The present invention relates to the isolation of novel human PRO polypeptides, and the polymucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for modulating consistent of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides, and for for cells expressing PRO polypeptides are useful for for stimulating the proliferation or differentiation of chuman blood, for stimulating the proliferation or differentiation of chomorocytes, and detecting the proliferation of antisense RNA and condrocytes, and detecting the prosence of tumours. The polymicleotide condrocytes, and detecting the prospetides, for generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generation and transgenic consists of patent was obtained in gene therapy. ABU66570-ABU66844 represent the human PRO polypeptides of the invention. Note: The sequence data for this center sequence data for this are sequence data for this at sequence.

                                                                                                                                                                                         The invention relates to an isolated PRO polypeptide having at least 80% amino acid sequence identity to: (a) any one of 61 fully defined amino acid sequences given in the specification (depearing as ABU94347- adid sequences given in the specification); (c) an amino acid sequence encoded by the nucleotide sequence approach in the specification); (c) any one of the PRO sequences which its associated signal peptide; of (e) an extracellular domain of the PRO polypeptide with its associated signal peptide; or (e) an extracellular domain of the PRO polypeptide with its associated signal peptide; or (e) an extracellular domain of the PRO polypeptide with its associated signal peptide. Also include are the nucleic acids encoding the PRO polypeptides where the nucleic acids encoding the PRO polypeptides and nucleic acids are useful in diagnosing or treating entercoolitis, gastrointestinal ulceration, skin diseases associated with cancers such as squamous cell carcinoma, Alzheimer's disease, PADA and ADA as squamous cell carcinoma, Alzheimer's disease, e.g. cancers such as squamous cell carcinoma, Alzheimer's disease, e.g. cheumatoric artheritis, asthma or multiple sclerosis, organ failure, athematory diseases, e.g. cancers such as squamous cell carcinoma, Alzheimer's disease, permature concerned with re-growth of tissue. The nucleotide sequences may be used to polypeptides are also useful for wound repair and associated therapies concerned with re-growth of tissue. The nucleotide sequences may be used concerned with re-growth of tissue. The nucleotide sequences may be used concerned with re-growth of tissue. The nucleotide sequences may be used to bolypeptides, in assays to identify other proteins or molecules involved tissue to probes in chromosome and gene mapphing, or in generate transgenic and molecules are also useful in turn are useful in the development and screening of therapeutically useful reagents, for chromosome identification, and cissues purposes. The anti-PRO antibodies may be used in diagnostic assays f
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

US2003036179-A1 Homo sapiens,

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in linking a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO cin modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO1154 and PRO1186 ctimulate adrenal cortical capillary endothelial growth, and PRO516, PRO143, PRO828, PRO826, PRO826, PRO826, PRO9156, PRO943, PRO828, PRO826, PRO1164 and PRO1186 or pro943, PRO828, PRO826, PRO1164 and are thus useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular cancerous tumours. PRO812 inhibits vascular cancerous tumours. PRO812 inhibits wascular candathelial growth factor (WESF) stimulated proliferation of endothelial coll growth factor (WESF) stimulated proliferation of candathelial growth and PRO136 and PRO136 or Collection of mammals which would be beneficial in inhibiting tumour growth. PRO826, PRO136 or PRO132 is also enhances survival/proliferation of immune response. PRO828, PRO826, PRO132 is also enhances survival/proliferation of disorders of injuries, e.g. retinitis pigmencosum, AMD. PRO819, PRO813 and PRO11066 induce proliferation of mammals whichey mesangial cells, and therefore are useful for treating vich as Berger disease or other nephropathies associated with dermatitis, herpetiformis or culture and are thus useful for treating sports injuries, and arthritis. This is the mino acid sequence of a novel human PRO protein ö Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis. New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 of PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.

Claim 12; Fig 354; 659pp; English.

The invention relates to an isolated nucleic acid comprising at least 80% sequence identity to a PRO (secreted and transmembrane protein) CDNA comprising a nucleic acid (a) encoding a PRO polypepide, or its comprising a nucleic acid (a) encoding a PRO polypepide, or its comprising any of the 275 120-850 residue amino acid sequences, comprising any of the 275 300-3500 nucleotide sequences, given in the specification; (b) comprising any of the 275 300-3500 nucleotide sequences given in the specification, or of the DNA deposited under any of the American Type (a) properties of the DNA deposited under any of the American Type (a) properties of a properties of the DNA deposited under any of the American Type (a) properties detailed above, a chimacian inscribed, the isolated PRO polypeptide of fused to a heterologous amino acid sequence, an anti-PRO polypeptide of fused to a heterologous amino acid sequence, an anti-PRO antibody, detecting a PRO polypeptide in a sample suspected of containing the PRO polypeptide, linking a bioactive molecule to a cell expressing a PRO polypeptide, simulating the release of tumour necrosis (actor-alpha TYMF-alpha) from human blood, (or proteoglycans from cartilage or cytokine from peripheral blood enonuclear cells (PBNC), and peripheral prome peripheral blood enonuclear cells (PBNC), and peripheral prome peripheral blood enonuclear cells (PBNC), and peripheral proferention of inner ear utricular supporting cells (or prolliferation of inner ear utricular supporting cells (or prolliferation of inner ear utricular supporting cells (or of T-lymphocyte cells, or of endochtellal earls), inhibiting the binding of A-peptide to factor villa, or differentiation of adipocyte cells, or of endochtellal cells, inhibiting the presence of a tumour in a mammal and an and an acid process.

 ö
in the specification. The polymucleotide is useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polymucleotide may also be used in preparing PRO polymptides by recombinant techniques, and in generating either transgenic animals knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polyment animals antibody is used in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as tumours, and in various diagnostic assays. The present sequence rperseents a PRO
                                                                                                                                                                                                                                                                                                                  Human; PRO; secreted; transmembrane; pharmaceutical; diagnostic; biosensor; bioreactor; therapeutic; hyperplasia; endometriosis; cancer; tumour; ischaemia; coronary arterial disease; polycystic kidney disease; renal failure; inflammatory response; asthma; rheumatoid arthritis; psoriasis; multiple sclerosis; gene therapy; cytostatic; gynecological; cardiant; nephrotropic; hepatotropic; antiinflammatory.

           The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptide, for linking at least one biological activity of a cell. The PRO polypeptides or polynucleotides are also useful as pharmaceuticals, diagnostics, biosensors or bioreactors, for detecting or treating e.g. hyperplasis, endometriosis, cancers (e.g. those involving solid tumours), ischaemia, coronary arterial disease, polycystic kidney disease, chronic or acute renal failure, or inflammatory responses (e.g. asthma, theumatorid arthritis, psoriasis or multiple sclerosis) in mammals. The PRO genes may gene. The sequences presented in ABUG4499-ABUG4559 are the PRO polymucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, gene therapy; mucogal lesion; ulcer; enterocolitis; skin disease; psoriasis; cancer; lung cancer; colon cancer; nerve cell disease; Alzheimer's disease; Parkinson's disease; Usher syndrome; anglogenesis; atrophia areata; inflammatory disease; asthma; rheumatoid arthritis; ischaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15-SEP-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       15-SEP-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          29-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           30-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-DEC-1999
18-SEP-1997
                                                                                                                                                                                                                                                                                                                                                                                              29-OCT-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             03-NOV-1997
                                                                                                                                                                                                                                                                                                                                                                                                               29-OCT-1997
 The invention relates to sixty one nucleic acids encoding PRO
polypeptides (secreted and transmembrane). The polynucleotide is useful
in molecular biology, including uses as hybridisation probes, in
chromosome and gene mapping, in generating antisense RNA and DNA, and in
chromosome and gene mapping, in generating antisense RNA and DNA, and in
chromosome and gene mapping, in generating antisense RNA and DNA, and in
chromosome and gene mapping, in generating acidine.
Creating a compinant techniques, and in generating PRO
polypeptides by recombinant techniques, and in generating either
development and screening of therapeutically useful reagents. The PRO
polypeptide or the antibody is used in preparing a medicament for
treating a condition responsive to the polypeptide or antibody, such as
mucosal lesions e.g. ulcers and enterocolitis, skin disease e.g.
psoriasis, cancer e.g. lung cancer and colon cancer, nerve cell disease
e.g. Alzheimer's disease and Parkinson's disease. Usher syndrome,
carrophia areata, angiogenesis, inflammatory disease e.g asthma and
rheumatoid arthritis, ischaemia, and in various diagnostic assays. The
present sequence represents the amino acid sequence of a PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; gene therapy; tumour; tissue typing; obesity; arthritis; diabetes; hypoinsulinaemia; hyperinsulinaemia; vascular permeability; cardiac insufficiency disorder; immune response; regeneration; cartilage; auditory hair cell; hearing loss; bone disorder; sports injury.
                                                                                                                                             Sixty one isolated nucleic acids encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful in chromosome and gene mapping, in generating antisense RNA and DNA, and in treating cancer and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

```
The invention relates to an isolated, secreted and transmembrane prolypeptide; termed PRO polypeptide. The polypeptide is useful for identifying agonists or antagonists of the polypeptide, for preparing confidentifying agonists or antagonists of the polypeptide, for preparing confidentifying agonists or antagonists of the polypeptide is also useful for recombinantly expressing those markers. The polypeptide is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. The mucleic acid is useful as therapeutic confident in the preparation of PRO polypeptide, for antisense RNA and DNA, in the preparation of PRO polypeptide, for antisense RNA and DNA, in the preparation of PRO polypeptide, for cuseful in the development and screening of therapeutically useful construct hybridisation probes for mapping the gene which construct hybridisation probes for mapping the gene which cancer therapeutically useful in the development and screening of therapeutically useful cancer, and for generating probes for polymerase chain reaction (PCR), Northern analysis, Southern analysis of individuals with generic disorders, and for generating probes for polymerase chain reaction (PCR), Northern analysis, Southern analysis and Mestern analysis, of specific cells, tissues or serum and for affinity purification of PRO for antibody is useful for the preparation of medicament for treating obsesity, diabetes or antibody is useful for the preparation of medicament for treating obsesity, for inhibiting tumour growth, enhances vascular permeability and immune treating the angles or serum and for treating obsesity, diabetes or response, for inhibiting tumour growth, enhances vascular permeability and immune treating the aning loss in mammals and for treating bone and/or cartiage creating enemanders sequence of a human secreted and transmembrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.
                                                                                                                                                                                                                                                                                                                   Ashkenazi A, Botstein D, Desnoyers L, Eaton DL, Ferrara N; Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME, Goddard A; Godowski DJ, Grimaldi JC, Gurney AL, Hillan KJ, Kljavin IJ; Mather JP, Pan J, Paoni NF, Roy MA, Stewart TA, Tumas D; Williams PM, Wood WI;

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer.

Claim 12; Fig 354; 659pp; English.

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DRA deposited under American Type Culture Collection (ATCC) accession number in a list given in the specification. Also included are vectors and host cells for producing PRO proteins, PRO fusion proteins, anti-PRO antibodies, PRO

The invention describes sixty one nucleic acids encoding PRO polypeptides (secreted and transmembrane). The PRO polypeptides and nucleic acids are useful in diagnosing or treating enterocolitis, gastrointestinal curers or useful in diagnosing or treating enterocolitis, gastrointestinal are useful in diagnosing or treating enterocolitis, gastrointestinal curers or ulceration, skin diseases associated with abnormal keratinocyte differentiation, e.g. psoritasis or epithelial cancers such as equamous cell carcinoma, Alzheimer's disease, Parkinson's disease, amyotrophic atteral sclerosis, inflammatory disease, Parkinson's disease, amyotrophic asther or multiple sclerosis, premature aging, AIDS, cancer, injury, infertility, birth defects, premature aging, AIDS, cancer, diabetic complications, or mutations in general. The polypeptides are growth of tissue. The PRO polypeptides and nucleic acid molecules are calso useful in gene therapy, and as molecular weight markers for protein clectrophoresis purposes. The anti-PRO antibodies may be used in clectrophoresis proposed for PRO, or for the affinity purification of PRO from clecombinant cell culture or natural sources. This is the amino acid correction acid molecular maine acid molecular 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, 88; gene therapy; apoptosis; bleeding; tumour; ALS; gynaecological disease; hysterectomy; angiogenesis; skin disease; cancer; coronary ischaemic condition; gastrointestinal mucosa disorder; asthma; mucosal lesion repair; keratinocyte differentiation; psoriasis; Parkinson's disease; Alzheimer's disease; amyotrophic lateral sclerosis; neurodestry; brook coagulation cascade disorder; thrombosis; haemorrhage; neurodegenerative disease; endometrial bleeding; wound healing; tissue repair; rheumatoid arthritis; multiple sclerosis; tissue typing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating abnormal bleeding involved in gynecological diseases, skin diseases and neurodegenerative diseases.

Claim 12; Fig 34; 467pp; English.

The invention relates to an isolated secreted and transmembrane PRO polypeptides are useful for modulating biological activity of a cell, in diagnosing or treating abnormal bleeding involved in gynaecological diseases e.g. to avoid or lessen the need for in gynaecological diseases e.g. to avoid or lessen the need for condition, disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lessons, skin diseases associated with abnormal keratinocyte (asteroristical of e.g. psoriasis), Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis (ALS), neuropathies, disease cascade disorders, neurodegenerative disease, thrombosis, hamorrhage, cascade disorders, neurodegenerative disease, thrombosis, hamorrhage, candometrial bleeding, wound healing, tissue repair, asthma, rheumatoid arthritis, multiple sclerosis. Nucleic acid encoding PRO polypeptides are useful in molecular biology including uses as hybridisation probes and in the generating transgenic animals or knockout animals. The PRO cappeptides and their nucleic acids are useful for tissue typing. PRO cappeptides and their nucleic acids are useful for tissue typing. PRO cappeptides and their nucleic acids are useful for tissue typing. PRO campibodies are useful for dispussion in specific cells, tissue typing. PRO cappides and their PRO antibodies are useful in diagnostic assays for sources. The present sequence represents the amino acid sequence of a human secreted and transmembrane PRO polypeptide

Sequence 696 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            29-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                30-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-DEC-1999
The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the crelease of TWF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in perioryte cells, for stimulating the proliferation of or gene expression in perioryte cells, for stimulating the proliferation of inner ear utricular supporting cells, cor stimulating the proliferation of finer ear utricular supporting cells, for stimulating the proliferation of finer ear utricular supporting cells, cor stimulating the proliferation of endothelial cells, for stimulating the proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, correlations prolating genomic and cDNA nucleotide sequences or actisens probes. (I) is also useful st herapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding in terraction. A polymucleotide (II) encoding (I) is useful in chromosome cor and gene mapphing, in generating transgenic animals or knockout animals which in turn are useful in the development and corposes. An anti-(I)-antibody is useful in diagnostic assays for PRO, error corposes. An anti-(I)-antibody is useful in diagnostic assays for PRO, encombinant cell culture or natural colling its expression in specific cells, itsense or serum, and for sources. (I) and (II) are useful for tissue typing. This is the amino colling the useful for tissue typing. This is the amino colling the movel human secreted and transmembrane PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; PRO; secreted polypeptide; transmembrane polypeptide; tumour necrosis factor-alpha; TNF-alpha; chondrocyte cell; tumour; cancer; adrenal; lung; colon; breast; prostate; rectum; kidney; cervix; liver; microvascular endothelial cell; glucose; FRA; skeletal muscle cell; adipocyte cell; pericyte cell; inner ear utricular supporting cell; T-lymphocyte cell; endothelial cell tube formation; bone disorder; cartilage disorder; sports injury; proteoglycan; articular cartilage defect; osteoarthritis; rheumatoid arthritis; haemoglobin-associated disorder thalassaemia; immune system cell infiltration.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polypuclocides encoding them. The invention also relates to an antibody which specifically binds to a PRO cinvention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as a tips and in gene therapy. The polymucleotides may also artisense RNA and DNA and in gene therapy. The polymucleotides may also contisense the prostating atther transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development, for scinniarial and input to the polypeptides or medicament for transfing a condition responsive to the polypeptides or medicament for transfing a condition responsive to the polypeptides or stimulating the upcake of continuating differential muscle cells, for adipocyte cells, for stimulating the proliferation of orgene expression in periotyce cells, for transfing the proliferation of inner ear usticular supporting cells or T-lymphocyte cells, for inducing endotheblal cell tube formation and for transfing the proliferation of inner ear usticular supporting cells or transing continuations become and/or cartilage defects, osteoarthritis and rheumatoid arthritis. Row polypeptides which stimulate the release of proteoglycans from artilage are useful for treating sports release of proteoglycans articular cartilage defects, osteoarthritis and rheumatoid arthritis. The inventeer such as various thalassaemias and conditions which may benefit from enhanced 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid encoding a secreted and transmembrane polypeptide, designated e.g. PRO1114 or PRO4978, useful in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Deforge L, Desnoyers L, Filvaroff E, G:

The invention discloses isolated PRO secreted/transmembrane polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that gecifically bind to the PRO polypeptide for linking a tamibodies that gecifically bind to the PRO polypeptides are useful for adaltating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a talest one biological activity of a cell. PRO polypeptides are also useful for detecting discorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal leions, skin diseases associated with the proservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal leions, skin diseases associated with the proservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal leions, skin diseases related to uncontrolled cell growth, e.g. cancer. Additionally disease related to uncontrolled cell growth, e.g. cancer. Additionally disease related to uncontrolled cell growth, e.g. cancer. Additionally disease related to uncontrolled cell growth, e.g. cancer. Additionally in requesting other pro-sesociated disorders, in modulating chromic agent with reduced risk for heamorrhage as compared with network as role in neurodegenerative diseases or their reversal, as an arithrombotic agent with reduced risk for heamorrhage as compared with have a role in apoptosis, the polymucleotides are useful in chromosome and gene mapping in the generation of antisense RNA and DNA, consome and gene mapping in the generation of antisense RNA and DNA chromosome and gene mapping in the development and screening of individuals which are useful in the development and screening of the respective secondarial as molecular marker for process electrication of control cells, tissues or serum and for affinity purification of the PRO polypeptide (agnited) or prevent the ef ulceration, Alzheimer's disease, amyotrophic lateral sclerosis, Usher Gaps ö 6; Length 696; 0; Indels Score 42; DB 6 Pred. New PRO nucleic acid, useful for preparing a composition for treating e.g., tumors.

Claim 12; Fig 354; 660pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. lung, colon, breast, profileration or differentiation of chondrocyte cells and a method for testing the presence of a tumour in a mammal (e.g. lung, colon, breast, prostate, rectal, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in Chromosome and gene mapping, in generating antisense RNA and DNA and in Chromosome and gene mapping, in generating antisense RNA and bNA and in Chromosome and gene mapping, in cluding uses as hybridisation PRO colophypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the colophypeptides or antibodies are used in preparing a medicament for trating a condition responsive to the polypeptides or antibodies are used in preparing a medicament for trating a condition responsive to the polypeptides or antibodies are used in preparing a such as tumours, for modulating the uptake of glucose or FRA by adipocyte cells, for stimulating the release of proteoglycans from

cartilage, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the release of cytckines from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells and for stimulating the proliferation of endothelial cells. This sequence represents a human PRO polypeptide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the control of the invention of the invention of the cells, for release of TNP-labha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or dispocyte cells, for stimulating the proliferation of fore expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating proliferation of T-lymphocyte cells, for stimulating of the presence of unmour in a mammal. The tumour is lung, colon, breast, cells, for stimulating genomic and cDNA nucleotide sequences or antisense probes. (1) is also useful as therapeutic agent, proliferation of antisense probes. (1) is also useful as therapeutic agent, in the inner provided in binding interaction A polyuncleotide (11) encoding (1) is useful in chromosome content of PRO polypeptide, for generating transgents and profice cells, in generation of antisense RNA and bNA, in the concent of an open content and secreting of therapeutically useful reagents, in generation of secreting its expression in specific cells, tissues or serum, and for cereating the sexpression in specific cells, tissues or serum, and for concent.) and sequence of a novel human secreted and transmembrane PRO

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
